Dear Customer,

The Government of Spain has taken today 29th March 2020 additional measurements with the aim to reinforce the ones already taken two weeks ago for stopping the spread of the COVID-19 Outbreak. Basically, it has been increased the number of activities, those classified as not essentials, that need to be suspended till next 9th April. Our activity is within the so-called of **special consideration** for its participation in the value chain that allows the guarantee of food supply. Therefore, we will continue, as until now, with our activities **and we will do everything in our power to continue supplying goods.**

On another hand, works in the greenhouse and land preparation are in progress an everything is ready to start this week transplanting in Extremadura. In Andalucia transplanting started three weeks ago and it is progressing smoothly, of course taking all the preventive measurements and with all the difficulties that brings this special situation.

Right now, the main concern of Grupo Conesa is trying to guarantee the health of all our employees and the continuity of business activity. To this end, we have taken different preventive measurements.

All those people from the administrative, quality, logistics, commercial, technical and Human Resources services **who can work from home** are doing so from 15th March.

The entrance of any external person that is not essential for the continuity of the activity has been prohibited.

A strict control protocol has been activated for **truck and container drivers**

In relation to employees who are in field, greenhouse, production, maintenance and expeditions, a strict protocol of preventive measurement has been developed and the main measures taken are: compliance with *hygiene measures*; what to do if they ***have symptoms, working hours have been reorganized*** to avoid a high concentration of people; ***the canteen*** has been limited to a maximum of 5 people at a time; everything has been organize to keep a ***safety distance*** of 2 meters; in ***the goods preparation area*** two work shifts have been established to divide the staff in half; daily ***disinfection*** of the common areas is being carried out and the cleaning of the same has been reinforced; employees cannot ***share a vehicle*** to attend work,...

In any case, the fact of having 7 production centres in different locations where the products produced in the campaign are stored and 3 production centres where tomato powder is produced represents an element of security in the event of emergency conditions.

In recent days there is a movement around the world tending to increase the levels of stocks and in some cases due to the massive supply of the population, we have registered a significant increase in orders, which is why sometimes we find ourselves with a lack of trucks and / or containers to supply in a timely manner, so we ask for a little patience and understanding.

We will continue to monitor the situation very closely and will proceed to implement any measure in our hands to continue supplying our products.

For any questions or needs do not hesitate to contact your contact person at Grupo Conesa.

Take care and stay safe.

Best regards.

Villafranco del Gadiana, 29th March 2020

Manuel Vázquez Calleja
